

An abstract graphic on the left side of the slide. It features a blue silhouette of a person climbing a rope. The rope is represented by several thick, curved lines in shades of blue and green. The person is positioned on the left, with their arms and legs extended as if climbing. The background is white.

How to manage Azure with Logic Apps - 5 scenarios for daily use

Overview Logic Apps

Azure Integration Services

Overview Logic Apps

Automate workflows and orchestrate business processes easily

Out-of-the-box connectors reduce integration challenges

Connect and integrate data from the cloud to on-premises

B2B and enterprise messaging in the cloud

Powerful web-based workflow designer

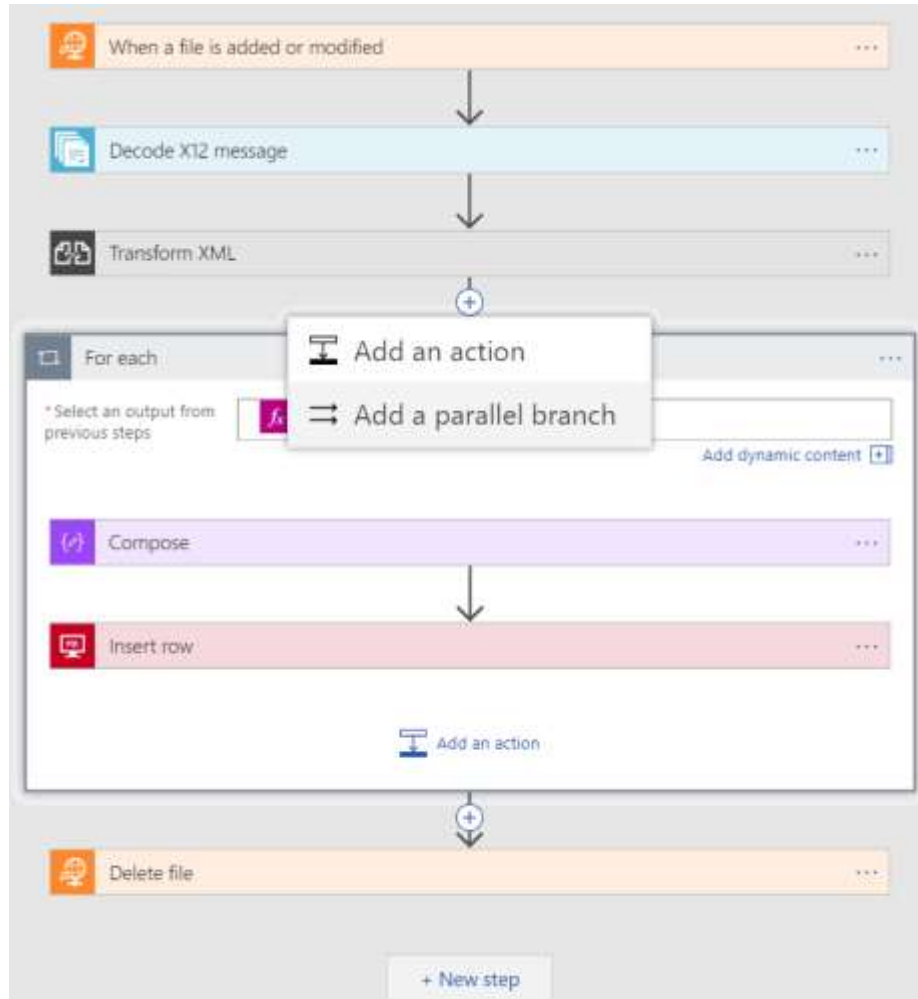

Overview Logic Apps

Visual Designer
triggers and actions

More than 200 connectors

No code logic: If, For Each,
Do Until, variables and
much more

Built for mission critical 24x7
Enterprise Integration

Logic Apps Cost

Actions:

Triggers

"Built-in" or native actions such as HTTP, ...

Calls to connectors (e.g O365, Dropbox, ...)

Control flow steps, (loops, conditions, ...)

Connector:

Standard: O365, DropBox, ...

Enterprise: SAP, IBM MQ, and IBM 3270

	PRICE PER EXECUTION
Actions	€0.000022
Standard Connector	€0.000106
Enterprise Connector	€0.000844

Private Logic Apps

Integration Service Environments

Connect on-premises, hybrid and cloud applications

Run mission-critical, complex integration scenarios with ease

Integration Service Environments

VNET connectivity

Private static outbound IPs

Custom inbound domain names

Dedicated compute

Isolated storage

Flat cost

Scenario 1 – Having fun - #CreateThisStuff

@m_b_g_

An abstract graphic on the left side of the slide. It features a blue silhouette of a person standing with arms outstretched. Several thick, curved lines in various shades of blue, green, and purple flow around the person, creating a sense of movement and connectivity.

Scenario 2 – Help others - #SharePoint

@mcblog_

Scenario 3 – Working in Teams - #StartLAB

@m_b_g_

Scenario 4 – Cleaning Up - #HereYouGoAzureStorageBLOB

@mcblog_

Scenario 5 – Security - #SecureThatAll

Azure Scheduler will retire on
September 30, 2019

No

Wait

December 31, 2019

Logic Apps as a better Scheduler

Simple Recurrence

Interval and Frequency

Every 30 seconds, 5 minutes, 1 month

Start time

Date-time for the first execution

No earlier than date-time for prescribed schedules

Complex schedules

Specify minutes, hours, weekdays, month days of the recurrence

Every Sunday at noon, every 15 minutes during work hours

The screenshot shows the 'Recurrence' configuration pane in a Logic App. It includes fields for Interval (set to 1), Time zone ((UTC-08:00) Pacific Time (L...)), Start time (2018-09-24T09:00:00Z), On these days (Monday), At these hours (9), and At these minutes (Enter the valid minute value). A dropdown menu for Frequency is open, showing options: Week, Month, Week, Day, Hour, Minute, Second, and Enter custom value. A Preview section at the bottom states 'Runs at 9:00 on Monday every week.' and a 'Hide advanced options' link is visible. Below the pane is a 'Scheduled actions' bar with a plus icon and a downward arrow.

Logic Apps as a better Scheduler

Job Management

- No job collection bucketing
- Run once instance, not job
- Separate auth into connections

Scheduling

- Time zones with DST
- Higher recurrence granularity

Job Definition

- Over 200 connectors
- Multiple actions
- Reduce solution complexity
- Hybrid integration
- Designer with templates

Error Handling

- Exponential retry
- Action timeouts
- Custom retry logic
