Tip 1 – Have your Azure Governance set

Azure Governance as the basis for Cloud Adoption

Rules and Policies for Cloud Usage

Baseline for Auditing
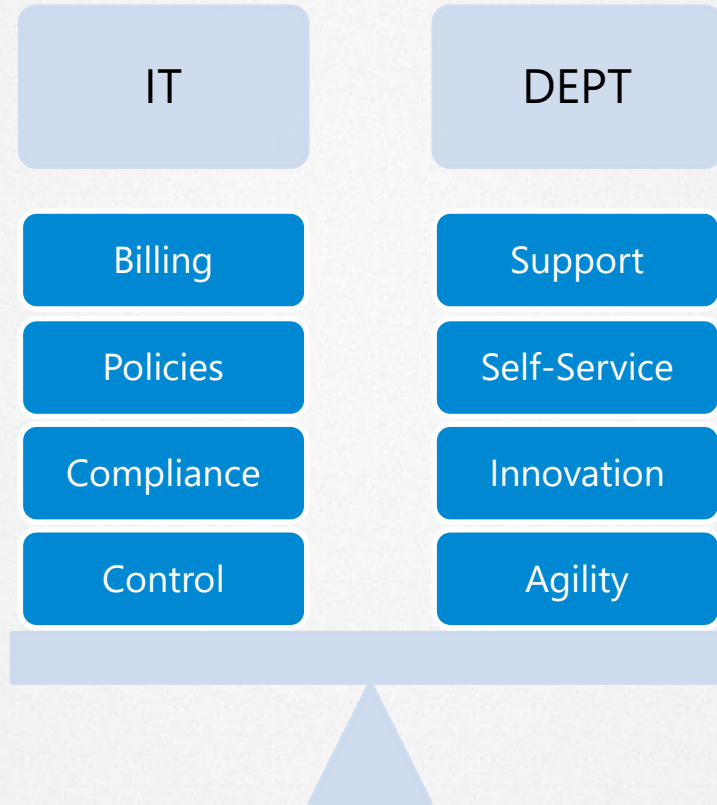

Continuous optimization

Enable projects to work on their own

Tip 2 – Think about different requirements

IT	DEPT
Billing	Support
Policies	Self-Service
Compliance	Innovation
Control	Agility

Tip 3 – Assess your infrastructure

Information is the base of success

Check your inventory

Check your contracts

Define your needs

Define your benefits

Tip 4 – Do not rebuild your on-premises structure

Cloud needs trust

Good old DMZ not interesting anymore

New services require new ways

Agile is only possible if you are agile

Tip 5 – Azure consumption is billed

"In Azure nobody cries for you"

If you run resources you have to pay for them

Have cost monitoring in place

Usage APIs and 3rd Party Tools available

Good structure helps to divide costs

Tip 6 – Identity is the new perimeter

Azure AD is the center of everything

Instead of DMZs – build modern Auth-based solutions

Support the modern Workplace

Always on but secure

Tip 7 – Include your users

Involve users in project
Use Key-User Framework
Focus on benefits
Explain and evangelize
Train and educate
Check processes and consider change
Managed Services can help to focus

Tip 8 – Consider Transformation instead of Migration

Build logical blocks ➔ do not move ERP without DB
Technical and licensing show-stoppers
Define your infrastructure requirements
Check your application compatibility
Think about processes
     Development / Deployment
     Update / Upgrade
     Help-Desk
     SLAs

Tip 9 – Keep up to date

Continuous Learning and Knowledge Growth

Implement new features and services

Review architecture on a regular basis

Audit your Governance

Consider changes fast

Tip 10 – Plan for the future

End to end planning

Save money and forecast cost

Keep an eye on resources

Better adoption of services

IaaS to PaaS

Tools

Documentation tools
Assessment tools
Migration tools
Cost Management
